EDUCATION

University of Toronto

September 2025 – Present

Honours Bachelor of Science — Mathematics and Statistics (Co-op)

SUMMARY

University of Toronto student who builds and operates automation and software systems, with experience shipping production applications, collaborating with others, and designing systems for failure and recovery.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Web & Backend: FastAPI, Node.js, React, Next.js, REST APIs

Data: PostgreSQL, SQLite, Supabase, SQLAlchemy, NumPy

Automation & Testing: Playwright, Pytest, Git, GitHub Actions, PowerShell

EXPERIENCE

Software Developer — GE Appraisal Consultant Service

May 2026 – August 2026

React, Supabase, PostgreSQL, Leaflet.js, Vercel

- Partnered with appraisal staff to build and deploy a React/Supabase property research application for 225+ appraisal reports, enabling nearby property comparisons by location and key attributes.
- Reduced comparable-property and report lookup time from **15–20 minutes to 1–3 minutes** with clustered map pins, address autocomplete, and detailed property records.
- Built report-ingestion workflows for report metadata, photos, PDFs, and document bundles; secured records with Supabase Auth, PostgreSQL row-level security, role-based access, and signed URLs.

PROJECTS

Runway — Social Media Post Creator

July 2026 – Present

Python, FastAPI, SQLAlchemy, SQLite, NumPy, Next.js, TypeScript

- Built a web application that reduced post research and captioning time from **~2 minutes to under 20 seconds** across 60+ posts by surfacing relevant historical examples and generating caption options.
- Indexed 770+ historical posts into 4,800+ searchable image and text records and cached 136K+ similarity results, avoiding repeated comparisons during retrieval.
- Collected nearly 400 labeled creator preferences and evaluated two versioned caption-ranking models against an existing baseline; retained the baseline after offline tests showed no reliable improvement.

Automation Supervisor — Process Monitoring & Recovery

June 2026 – Present

Python, Textual, Windows ConPTY, PowerShell

- Built a Python/Textual process supervisor managing **29 automation workflows**, extending three live systems from an 8-hour daily operating window to 24/7 supervised coverage.
- Recovered jobs after crashes, network outages, terminal exits, and restarts using completion validation, controlled retries, and an independent watchdog.
- Validated crash, hang, restart, and network-loss recovery with automated tests covering 70+ fault scenarios.

CS2 Marketplace Automation

January 2026 – Present

Python, Node.js, Playwright, REST APIs, GitHub Actions

- Built Python and Playwright workflows around marketplace REST APIs, processing **200K+ unique listings** and automating price comparisons and transactions within configured limits.
- Managed **2,000+ buy-order** targets using live marketplace data, repricing outbid orders within price limits, restoring missing orders, and retiring outdated ones.
- Synchronized inventory, relisted items, and tracked 1,000+ sold items, generating US\$4K+ in net realized profit after fees.
- Persisted pending actions, prevented duplicate offers or purchases after crashes, enforced balance and rate limits, and verified uncertain responses before retrying.

ADDITIONAL EXPERIENCE

Content Creator — YouTube / Social Media

2021 – Present

- Grew social channels to 140M+ views, 290K+ followers, and US\$16K+ in revenue by using audience and retention analytics to create clear, engaging content and continuously test what resonated.
