

ERIC SONG

Toronto, ON | 647-829-3856 | eric.song@mail.utoronto.ca | github.com/ChardXBT | linkedin.com/in/ericychensong | ericsong.tech

EDUCATION

University of Toronto

Sept 2025 - Present

Honours Bachelor of Science - Mathematics & Its Applications Specialist, Probability/Statistics

Minor in Science, Technology & Society

PROFILE

Software-focused mathematics/statistics student building production automation, backend data pipelines, and internal full-stack tools used in live workflows.

SKILLS

Languages: Python, JavaScript, Java, SQL, R

Frameworks & Tools: React, Node.js, Playwright, Pandas, Requests/httpx, Git, GitHub Actions, Docker, PowerShell

Platforms & Data: Supabase, PostgreSQL, SQLite, Vercel, DigitalOcean, REST APIs, CI/CD, Authentication

EXPERIENCE

Software Developer - GE Appraisal Consultant Service

May 2026 - Present

React, Supabase, PostgreSQL, Leaflet.js, Vercel

- Designed and deployed a full-stack property appraisal platform that centralizes property records, documents, and location data in an interactive map for internal staff.
- Built geocoded property pins, autocomplete search, and PDF/folder-management workflows that reduced scattered lookup across appraisal records.
- Owned delivery from staff requirements through production deployment, securing internal data with Supabase authentication, PostgreSQL Row Level Security, role-based access control, and signed URLs.

PROJECTS

Production Marketplace Automation Platform

Jan 2026 - Present

Python, REST APIs, GitHub Actions, DigitalOcean, Monitoring/Alerts (Live, Production)

- Built and currently operate an end-to-end marketplace automation platform managing 150+ market targets across adaptive repricing, inventory relisting, and confirmed-sale logging; produced \$2,000+ in realized profit through live automated pricing and inventory workflows.
- Reduced average scheduled runtime by 93%, from 50 minutes to 3.3 minutes, through hot/mid/cold scheduling, persisted cooldowns, and more efficient API usage.
- Engineered stateful reconciliation across scheduled runs, including live order syncing, stale-state pruning, missing-order recovery, and safer restart behavior after interrupted jobs.
- Hardened production workflows with bounded update limits, atomic state persistence, rollback-protected config updates, watchdog exits, GitHub Actions deployment, and automated monitoring.

Cross-Market Pricing & Browser Automation Engine

June 2026 - Present

Python, JavaScript, Node.js, Playwright, SQLite, REST APIs, Unit Testing

- Built a modular pricing pipeline that scans marketplace inventory, retrieves exact-match Steam prices, ranks listings by cross-market price ratio, and exports CSV, JSON, Markdown, and webhook reports.
- Designed resilient data collection with SQLite caching, resumable pagination, request pacing, exponential backoff, stale-cache recovery, and fallback price providers.
- Operated a browser automation watcher that processed 89K+ listing-card reads, 2.5K+ demand-table reads, and 2.2K+ eligibility checks across 2.3K+ scan cycles.
- Processed 275 automated transaction submissions representing \$14K+ in tracked volume, gated by configurable edge, balance, liquidity, rate-limit, and price-safety rules; wrote 50 automated tests for adapters, caching, auth, ranking, exports, and fallbacks.

ADDITIONAL

Content Creator - YouTube / Social Media: 140M+ views, 290K+ followers, and \$20K+ USD revenue; used retention and performance analytics to scale repeatable content formats.

Math Tutor - Kwiki, UofT x Khan Academy Partnership: One-on-one mathematics tutoring focused on structured problem-solving and clear explanation.
